

Exhibit A

Chemical Compositions and International Designations / 427

6181 = AlSiMg0.8

6063 = AlMg0.7Si

The chemical symbols for addition elements should be limited to four:

6463 = AlMg0.7Si(B)

7050 = AlZn6CuMgZr

6063A = AlMg0.7Si(A)

If an alloy cannot otherwise be distinguished, a suffix in parentheses is used:

Note that suffixes (A), (B), and so on should not be confused with suffixes of the Aluminum Association.

Table 4 cross references ISO designations with equivalent or similar AA alloy designations. Also included in this table are cross-referenced alloys listed in Austrian, Canadian, French, German, British, Italian, Spanish, and Swiss standards. Additional information is included in the "Registration Record of International Alloy Designations and Chemical Composition Limits for Wrought Aluminum and Wrought Aluminum Alloys" (commonly referred to as the blue sheets) published by the Aluminum Association.
